Organized full-stack Web developer and IT professional, Agile methodologies, and code documentation. Expert in maintaining and enhancing user functionality, service delivery, and project management. Possess more than 3 years of experience with Laravel, PHP, Javascript, VueJS, ReactJS, jQuery, and Restful APIs.

PROFESSIONAL EXPERIENCE

ARZ General Trading, Full Stack Web Developer 📅 06/2023 – present | Beirut, Lebanon

- **Developed a Tradeflow platform:** Built a multi-step process for pricing requests, offers, and purchases with user-based supervision and confirmation chains—integrated subscription-based access with dynamic pricing for company users.
- **Designed a warehouse management & POS system:** Created Fozkudia, a system handling stock in/out, product requests, production reports, and client orders with credit limits. Built a waybill system for multi-truck shipments and included a POS section for real-time sales.
- **Built a Padel tournament management platform:** Developed a system to organize Padel tournaments, handle team registrations by player level, generate matches, and assign referees for live scoring. A petty cash section was added to manage financial transactions and invoices.
- **Implemented complex logistics and order fulfillment features:** Designed systems to manage inter-warehouse transfers, split large orders across multiple waybills, and track item weight/quantities for optimized transport planning.
- **Integrated online payments and subscription models:** Enabled secure online payments for subscription-based access, with flexible pricing depending on user count and feature usage across different company sections.
- **Tech Stack:** Laravel, PHP, MySQL, Livewire, Pusher, ReactJS, jQuery, JavaScript, HTML, CSS, Git and GitHub.

Al Bilani Transportation, Full Stack Web Developer 📅 04/2021 – 05/2023 | Sidon, Lebanon

- **Managed a 4-member cross-functional (backend, frontend, mobile developers) team** and coordinated with the manager toward the successful launch of a bus shuttle transportation system used by more than 10,000 daily users.
- **Expanded the customer base**, by building a secure online registration system compared to the “old-school” paper registration method.
- **Increased employees' time commitment**, by building an attendance system to calculate salaries based on working hours.
- **Optimized SQL queries** to increase website performance.
- **Implemented automated testing frameworks** like PHPUnit test for backend code in order to ensure high-quality standards are met before deploying changes live.
- **Worked with back-end and mobile application developers to design RESTful APIs.**
- **Tech Stack:** Laravel, PHP, MySQL, VueJS, JavaScript, HTML, CSS, Git, and GitLab.

EDUCATION

Bachelor Degree in Business Computer, Lebanese University 📅 09/2018 – 06/2021 | Sidon, Lebanon

A Business Computer major prepares students to apply computer sciences skills to business applications and provides a strong dual knowledge foundation in technical and problem-solving abilities.

SKILLS
